

TrueShift

PITCH DECK PRESENTATION

Problem Statement

Despite a strong interest in fitness, millions of people fail to maintain a consistent workout routine. The problem isn't motivation alone, but it is **clarity and guidance**.

Existing fitness apps overwhelm users with generic, one-size-fits-all plans or recycle the same workouts without explaining their purpose. Users are left confused about what to do, why they do it and whether they are doing it correctly, which ultimately leads to abandonment of fitness altogether.

Vision

To empower people everywhere to achieve lasting well-being by making healthy behaviour change intuitive, adaptive and sustainable, integrated seamlessly into everyday life

TrueShift's mission is to transform wellness from short-term effort into lifelong consistency by using AI and behavioral science to guide daily micro-actions across physical health, mental wellness and recovery, helping individuals understand their patterns, adapt in real time and thrive long before motivation fades.

Mission

TrueShift is an AI-powered wellness companion built to create lasting behaviour change. It moves beyond tracking outcomes to focus on the small daily actions and habits that drive long-term physical, mental and recovery health.

Through real-time personalization, TrueShift adapts to each user's life. Workouts adjust to energy and progress, meditation responds to stress and mood and sleep guidance supports smarter recovery everyday, not just at the start.

By continuously learning from user data, TrueShift helps people stay consistent. It reveals patterns, prevents burnouts and guides course correction making sustainable well-being achievable even when motivation drops.

Our Solution

Business Model

TrueShift will operate on **subscription-based model**, offering free entry and premium AI-driven wellness features.

Users will pay for adaptive fitness planning, personalized mental wellness and intelligent recovery coaching.

Enterprise partnerships with corporates, universities, healthcare providers and gyms enable scalable B2B revenue.

Potential Growth

- Growing demand for preventive healthcare and lifestyle-driven health
- Scope for evolving into an unified health intelligence platform
- As user data grows, personalization and predictive capabilities improve, increasing retention and lifetime value
- Digital-first model allows rapid expansion across geographies with minimal marginal cost
